Precision Phytopathology & Risk Report

AMBIGUOUS — AGRONOMIST REVIEW REQUIRED

The vision model's confidence in this diagnosis was below the safety threshold. No autonomous treatment recommendation has been generated. This case has been routed to a human agronomist for review.

1. Visual Diagnosis

Predicted class	Corn — Common Rust
Confidence	49.4%
Ambiguous (below 75% threshold)	Yes

Attention rollout overlay — highlights the leaf regions the model weighted most heavily in reaching this classification.

The result is unclear. A human review is needed to determine the best course of action. No treatment is recommended at this time.

2. 14-Day Environmental Risk

14-day risk	56.8%
Risk band	Moderate

High humidity and heavy rainfall increase risk, while warm temperatures decrease it.

3. Localized Report

(Hindi)
